These streets either were repaired as part of a recent street resurfacing project or require a more significant repair process than would occur as part of the slurry seal work. These severely stressed sections of the pavement need to be removed and repaired prior to repairing the street surface. These repairs take longer to plan and are more costly. The City recognizes the need for pavement repairs on these streets and plans to perform this work when funding is available.

If you have any questions or would like to discuss your street further, please call Alexander Yuen, Project Manager, at (650) 991-8064.
